Released Date: 8/31/2026

Language: English

Release Notes

Release Notes

- Fixed bugs
- Improved Buoyancy Calculator, Descent/Ascent Calculator and Pressure Calculator
- Support gas consumption for Deco Gas and Travel Gas
- Support Drag & Drop on Edit a Consumption
- Support multi gases on My RMVs
- Allow to save a buddy without an Equipment Group. e.g Buddy has a rebreather
- Allow to save a Real dive without a consumption. e.g. When teaching
- Export UDDF surface interval
- Export UDDF consumption for Deco Gas and Travel Gas
- Import UDDF consumption for Deco Gas and Travel Gas
- Improved Backup and Restore

Not used for this release:

- Support Database Restore from DB version 8 to DB version 10
- Helium when diving
- Stage when diving
- Altitude when diving
- Dive tables
- Bank, Cylinder and Hose specs in Calculate Nitrox and Trimix
- CCR
- Play Age Signals API

Known Issues:

- Perdix might stop connecting. Just recreate a new connection and none of the dive data will be lost
- Pairing Dive Computer with PIN
- Location of flags and buoy(s) on graphics
